

Ray Tracing

→ Line / Ray

$$P_{xy} = a_{xy} + b_{xy} * t \quad [b \neq d]$$

$$\begin{aligned} P_x &= a_x + b_x * t \\ P_y &= a_y + b_y * t \end{aligned}$$

Parametric Equation → for an Parameter (t)

$$(x-a)^2 + (y-b)^2 = r^2$$

Circles

$$\begin{aligned} a &= 0 \\ b &= 0 \end{aligned} \rightarrow x^2 + y^2 = r^2$$

$$\rightarrow y^2 = r^2 - x^2$$

$$y = \pm \sqrt{r^2 - x^2}$$

Update the value of Pixel that hits the cube & give some Value Based on the light & Normals etc

Scene

→ Ray = $a + b * t$

↑ ↗

Camera (let at (-3, -3)) Direction (1, 1)

for now no perspective

⇒ Circle ⇒ $x^2 + y^2 - r^2 = 0 \rightarrow$ let $r=2$

→ $a_x + b_x * t$ $a_y + b_y * t$

$$(a_x + b_x * t)^2 + (a_y + b_y * t)^2 - 4 = 0$$

$$\Rightarrow a_x^2 + (b_x t)^2 + 2a_x b_x t + a_y^2 + (b_y t)^2 + 2a_y b_y t - 4 = 0$$

$$(a_x^2 + b_x^2 + c = 0)$$

$$\Rightarrow (b_x^2 + b_y^2) t^2 + 2(a_x b_x + a_y b_y) t + (a_x^2 + a_y^2 - 4) = 0$$

$$\Rightarrow \begin{aligned} a &= (-3, -3) \\ b &= (1, 1) \end{aligned}$$

$$\begin{aligned} (1^2 + 1^2) t^2 + 2(-3 \times 1 + (-3 \times 1)) t + (9 + 9 - 4) &= 0 \\ 2t^2 + 2(-3 - 3)t + 14 &= 0 \\ \Rightarrow t &= \frac{12 \pm \sqrt{144 - 4 \times 2 \times 14}}{2 \times 2} \end{aligned}$$
